

Version 2.1.0

A smoother, clearer auction experience

Released September 27, 2026

What customers will notice

- **Reliable Watch List:** Watched lots now load reliably, with clearer controls for individual lots and bulk selection.
- **Easier account navigation:** My Watchlist, My Auction Activity, Saved Searches, Notifications, and alternate-payment requests are spaced and organized for easier use on phones and computers.
- **Better auction access:** The Auctions link is available from the main navigation on desktop and mobile.
- **Clearer customer tools:** Auction activity, saved searches, notification preferences, and related account pages now share the current website design and version information.
- **Improved password recovery:** Customers can request a password reset while logged out and return to their account more easily.

Auction and catalogue improvements

- Featured auction lots can be selected directly from the active L&R auction catalogue.
- Lot information used by customer pages is synchronized more consistently.
- Clean page addresses are used throughout active customer-facing navigation.
- Countdown, Watch List, and catalogue pages received additional stability checks.

Communications and updates

- Website Updates now shows the four newest notices so the page stays concise and useful.
- Email delivery reporting is clearer, including queued, sent, failed, rejected, opened, and link-click activity when that information is available.
- Provider responses make it easier for L&R to identify rejected messages, unavailable mailboxes, and other delivery problems.

Security and reliability

Version 2.1.0 includes additional protections for customer forms, account actions, password recovery, website settings, feedback processing, and overlapping Watch List requests. These changes help prevent duplicate actions, expired-form errors, and interruptions caused by simultaneous updates.
